Dear Hiring Committee:

Please find attached my resume for the Senior Associate UX/UI designer at Capital one. I am an extremely passionate UI/UX designer currently working on several independent projects with my professor in school. I believe that through my resume, you will find that I am very suitable for this job.

For the past two years, I have been passionately working in User Experience Design as a student. I have also worked on independent project. I have independently completed the redesign of Shein's interface and improved user satisfaction through Figma. I experienced every step of the complete process of a user experience design job, starting from having empathy for users and understanding their problems, all the way to the final testing stage. Under the guidance of the professor, I successfully completed the final testing stage with my classmates and obtained very useful suggestions.

At the same time, I am also studying the Google UX/UI design course in coursea, which to some extent helps me better understand how user experience designers work efficiently and successfully. This will further hone my software usage skills and design level.

I am very enthusiastic about the possibility of being Senior Associate for Capital one and have enclosed my resume for review. I would greatly appreciate the opportunity for an interview. Thanks for your time and consideration.

All the best,

Ya Guo
